

## Rebooting Mac OS X From Another Disk/Partition

To boot from the System CD on most newer Macintoshes, you can simply insert the System CD, restart the computer, then hold down the **C** key on the keyboard after you hear the startup chime.

To be able to choose the startup partition hold down the **Option** key on startup and choose which disk or partition to boot from.

Otherwise, you can use the following method:

### Mac OS X\*

- Insert the **System CD**.
- Go to the **System Preferences** Application and click on the **Startup Disk** icon.
- Click on the System with the CD icon, then close **System Preferences**, save the changes and restart.

*\*These instructions will also work for booting off another hard drive or external device with a valid OS.*
