

## How to Obtain a Hardware Address

### PC Computers using Windows 98

1. Click the **Start** button and select the **Run** option.
2. Enter **winipcfg** at the prompt in the **Run** window and press **Return**.
3. At the displayed IP Configuration window, the Hardware Address is the information labeled “**Adapter Address**” (a series of 6 sets of alphanumeric separated by hyphens).

### PC Computers using Windows 2K or XP

1. Click the **Start** button and select the **Run** option.
2. Enter **cmd** at the prompt in the **Run** window and press **Return**.
3. At the displayed DOS Command window, enter **ipconfig /all** and press **Return**.
4. The Hardware Address is the information labeled “**Physical Address**” (a series of 6 sets of alphanumeric separated by hyphens).

### Apple Macintosh Computers with Apple System Profiler

1. Click on the **Apple** menu and select the **Apple System Profiler** option.
2. Select the **System Profile** tab.
3. Scroll down to the **Network Overview** heading and turn down the triangle on right (if necessary) to see the **Apple Talk** heading.
4. The Hardware Address is the information on the right side labeled “**Hardware Address**” (a series of 6 sets of alphanumeric separated by hyphens).
