# How to Find the MAC and IP Addresses
On Mac and Windows Platforms

Mac OS X

1. Click on the Apple Menu and select System Preferences.

2. Click on the Network icon in the System Preferences window.

3. Double-click on the *Built-in Ethernet* shaded bar OR Click on *Built-in Ethernet* shaded bar and click on the **Configure** button below.

4. Click on the TCP/IP button, if not already highlighted.

The IP Address will be displayed to the right of "IP Address" in the area where the orange box has been drawn on the figure below (i.e. 130.191.17.231):
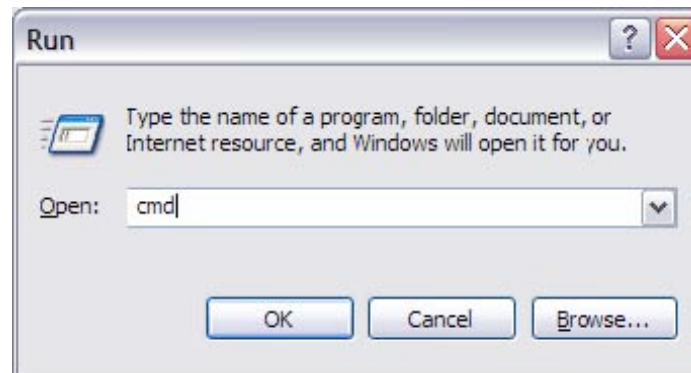

5. Click on the Ethernet button.

The MAC (physical) address will be located next to the Ethernet ID label, where the orange box has been drawn on the figure below (i.e. 00:0a:95:b4:73:5e):
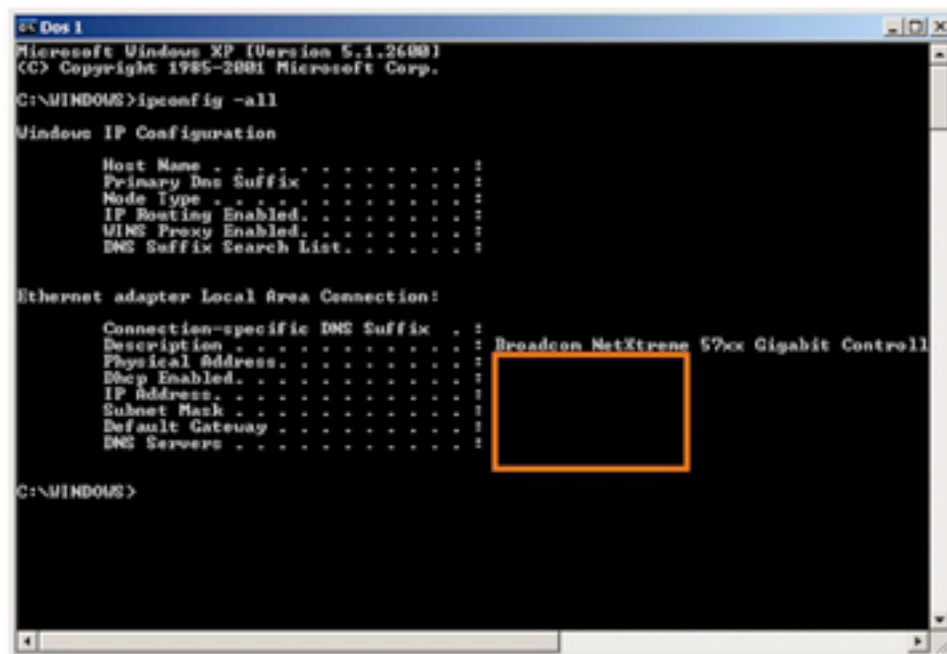

PC Windows XP

1. Click on the Start button and select Run.
2. When the dialog window appears, type cmd in the Text field and click the OK button.

3. When the Command Window and the prompt C:\WINDOWS> appears, type ipconfig /all and depress the Return key.

The MAC address will be located net to the Physical Address label. It will be formatted as pairs of alphanumeric characters (i.e. 00-12-16-A4-AF-6B). While the IP address will be located next to the IP Address label. It will be formatted as 4 sets of numbers, separated by periods. Each set will have at least one, but not more than 3 numbers (i.e. 130.191.17.121)

4. When you have recorded the address, click the Close box X in the upper corner of the window to close it.
