Millennium Client Software

Client Software Location

The Millennium client can be installed/updated by any administrator by running the installation program from the PACSUP directory (currently **S:\PACSUP\milup150_12.exe**) or from portable media.

The installation path must be **C:\Millennium** and the user's Windows account will need to be given **Modify** rights.

For a new Client installation

1. Launch **milup150_12.exe**

2. Input the name of the server (**libpac.sdsu.edu**) when requested.

3. Select the location of the ***Innovative Millennium*** shortcut when prompted (usually **C:\Documents and Settings***nnnnnnnn***\Start Menu\Programs\Library Software**). ***Note:*** *The nnnnnnnn will change to match user's account name.*

4. Copy the appropriate font properties file (e.g., **fontconfig.XP.properties**) from the **S:\PACSUP** directory to the **C:\Millennium\jre**1.5.0_12**\lib** directory. ***Note:*** *The 1.5.0_12 will change to the newest version number for the installation.*

To upgrade the Client

1. Run the client install program. No need to specify the server or create new shortcuts.

2. Install new ***fontconfig*** file if necessary.

Client Customization

The client requires a login/password to launch the appropriate Millennium module (MilCat, MilCirc, MilAcq, etc.) as well as user initials/password to access functions within each module. Users with personal logins can create a desktop and/or taskbar shortcut with their login/password encoded by setting command line target parameters:
C:\Millennium\iiirunner.exe username=*login* **password=***pwd*

Be sure to rename the shortcut to prevent it from being overwritten during subsequent client upgrades.
