How to Use the Mitsubishi LVP-X300 Projection System with Computer Display

To Power Up

1. Make the connection for the computer;

    If you are using a PC Laptop or G3/G4 Powerbook, attach the long cable on the podium to the Laptop's monitor connection.

    OR

    If you are using an "old-pre G3" or "iBook" Macintosh Laptop, add the short cable to the long cable, and then attach it to the Laptop's monitor connection.

2. Power on the computer using the Laptop's power button and wait 10-15 seconds before powering on the Mitsubishi LVP-X300 Projection System via the remote.

3. The Mitsubishi LVP-X300 Projection System's remote has a **BLUE Power** button. Point the remote at either the projection screen or the projection system, and hold the button down for 2 seconds.

4. If a "**NO SIGNAL**" is displayed on the projection screen, press the WHITE button labeled **COMPUTER**.   Press this until you see "**COMPUTER 2**" displayed on the projection screen in the upper right corner.   This will allow what is on the Laptop to be seen on the projection screen.

5. Check and set the resolution on the Laptop to 1024 x 768 for True Color, or if needed, 640 x 480 for 256 colors:

    If you are using a PC Laptop, select **Settings ….Control Panel….Display….Settings** tab.

    OR

    If you are using a Macintosh Laptop, select **Control Panels…..Monitors and Sounds** panel.

6.   If you want the Laptop's sound to emanate from the speakers -

A) Look inside the podium's lower shelf, find the **BLACK** RCA Amplifier box and turn on the **Power** button. Then check to see that the Phono Selector on the front of the box is pointing to **PC.** If it is not, turn it until it does.

B) Take the **RED**/WHITE cord from the **BLACK** RCA Amplifier and plug it into the speaker connection on the Laptop.

To Power Down

1.   Shutdown the PC or Macintosh Laptop and disconnect the cable/adapter.

2.   Turn of the Mitsubishi LVP-X300 Projection System via the remote. You must hold the **BLUE Power** button down for 3 seconds to turn the projection system off.

3.   If you have used the **BLACK** RCA Amplifier, please turn the power to **OFF**.
